

I can not understand why there is such a controversy about XM radio. It provides a needed service in the traffic and weather area, even tho local station do provide this service it is often weak and when you need it you can not receive the local stations clearly. It is a service that is paid for by each individual that listens to it and I belive a good service with its many channels and devirce broadcasts. I am only one person but I hope you listen to myself and others that want the FCC to reject petition 04-160.
